CAT-EYE GEL

APPLICATION GUIDE

CAT-EYE GEL

APPLICATION GUIDE

STEP 1: NAIL PREP

- Sanitise your and your customer's hands.
- Use a cuticle pusher — like ProPrep from our TGB Tools Range — to push back the cuticles before trimming away excess with nippers. We recommend the ProNip cuticle nippers.
- File nails into the desired shape using a TGB 220/240 File.
- Gently buff nails using a TGB 100/180 Buffer to remove any shine.
- Dehydrate and cleanse the nail plate using 100% pure acetone.

STEP 2: BASE COAT

- Apply your chosen base coat to the natural nail.
- Cure for 99 seconds on Low Heat Mode.

The lamp has been specifically designed to cure TGB products. We do not recommend the use of other lamps.

APPLICATION GUIDE

STEP 3: APPLICATION

- After curing your base coat and any chosen colour, apply an even layer of Cat-Eye gel over the nail.
- To use the Dual-Ended Magnetic Tool, position the magnetic part over the area of the gel you want to create your design on. It's dual-ended for maximum creativity – the rectangular end pulls the gel product, whereas the rounded end pushes the gel so you can experiment with different effects.
- Hold the tool in different areas over the nail until you get your chosen look.
- Cure for 60 seconds using TGB Light The Way Nail Lamp.
- Apply the Extreme Shine Top Coat and cure for another 60 seconds.
- Apply a small amount of Cuticle Essence to each cuticle, avoiding contact with the nail to minimise dulling of the top coat.

CAT-EYE GEL APPLICATION GUIDE REMOVAL

STEP 1: PREP

- Sanitise your own and your customer's hands

STEP 2: TOP COAT REMOVAL

- Using the 120/180 File, remove the top coat.

STEP 3: SOAK OFF

1. Soak TGB Removal Foil in pure acetone and wrap tightly around each nail.
2. Leave to soak for 10 to 15 minutes, times may vary depending on the thickness of the product left on the nail.

STEP 4: REMOVAL

- Remove the foil from one nail whilst keeping the others wrapped in acetone.
- Use the pusher end of your ProPrep tool to gently scrape away the gel.
- Don't force the gel off, if it's still hard, re-wrap the nail and leave the gel to soak for 5-10 more minutes. Repeat as necessary.
- Use your TGB ProPrep tool to remove any remaining soaked gel.
- Make sure you support the customer's natural nail tip with your finger while removing the gel to avoid bending or snapping the nail.

REMOVAL

STEP 5: BUFF AND SHAPE

- If there is any base coat/BIAB™ residue left, use a TGB 100/180 Buffer to gently buff it off.
- Any base coat left on the nail plate only needs to be slightly buffed to avoid over-buffing the natural nail. Concentrate on areas around the cuticles.
- Once all product is removed, apply a generous amount of Cuticle Essence.
