APPLICATION GUIDE
GLOW PIGMENTS

STUDIO EFFECTS - GLOW PIGMENTS

Our Glow Pigments have a glow effect in the dark for a fun nail finish. This glow can be charged under UV, LED and torch light, for an extra illuminating boost!

Disclaimer: Our glow-in-the-dark products will glow vibrantly for up to 2 weeks. After this period, the glow may fade. Results may vary based on usage and environment.

STUDIO EFFECTS - GLOW PIGMENTS

ENCAPSULATING GLOW PIGMENTS

This is a nail art technique where our pigments are sealed into the nail using a clear high-viscosity product e.g. TGB Top Coat, Clear BIAB™ or Diamond ProForm™ (clear).

STEP 1: PREP & APPLICATION

- Follow our TGB Gel Polish/BIAB™ Application Guide up to the top coat section.

STEP 2: TOP COAT APPLICATION

- Once you have applied your two coats of Gel Polish – or have applied your BIAB™ of choice and cured – apply one layer of top coat. Don't cure this layer yet.

STEP 3: GLOW PIGMENT APPLICATION

- Take your Glow Pigment and ProPrep tool (or anything you can use to scoop the powder up) and sprinkle the powder over the uncured gel top coat.

STEP 4: CURE

- Once the nail is covered in your chosen Glow Pigment powder, cure in the TGB Light The Way Nail Lamp for 60 seconds.

STEP 5: FINISH

- Dust off any excess pigment using your TGB Dusting Brush.

STEP 6: ENCAPSULATE OR SUGAR

- Encapsulate the cured loose pigment in Extreme Shine Top Coat or Rubber Top Coat 2.0 and cure for 60 seconds. Alternatively, you can not apply a top coat and leave this as a textured, sugared effect.
